*Dynamis*

# Dynamis

Beauty lies in the balance between harmony of the whole and the proportion of the details. Beauty is Harmony and from here we begin, to create a form which will provide the best musical reproduction. The 14 sides of Dynamis have proportions and planes carefully calculated to tune the loudspeaker, exactly in the manner of a musical instrument. Dynamis is able to give a truly lifelike, natural and emotive feeling from the music; because it can reproduce even the most minute har-

monic resonances audible to the human ear. Design and use of the multi-faceted form has been a special feature of Diapason loudspeakers for at least 25 years with the production of Adamantes, whose spatial dispersion from the drive units was perfected thanks to this cabinet shape. We are proud today to present to you Diapason Dynamis, our most ambitious project, and the culmination of our knowledge and skill in the conception and creation of a genuine 'instrument' for the finest musical reproduction.

## Specifications:

Frequency response: 24/20.000 Hz (+/- 3 dB)  
Tweeter: Ø 29 mm silk soft dome  
Midrange: Ø 18 cm paper cone Nextel coated  
Woofer: Ø 30 cm Alu cone Fiber glass dust cup  
Sensitivity : 89 dB/W/m  
Nominal impedance: 6 Ohm  
Type speaker: reflex  
Finish: metallic bronze, glossy white, dark grey, China red, metallic silver or other colour on demand  
Weight per speaker: 100 Kg  
Dimensions (W x D x H) cm : 45 x 68.50 x 127.50

Diapason reserves the right to change specifications to allow product improvement.
